Example

- Provisioned cluster – 8 ra3.4xlarge.
- Serverless – Base RPU 24, Max RPU 64.
 - Avg. 32 RPUs for 6 hours per day.
 - Does it make financial sense or provisioned is better.
- More than 1000 concurrent users run queries every day from 10am to 1pm.
- Weekly manual backup with 7 day retention.
- Ad-hoc query on S3 that scans approx. 1 TB of data. 150 such queries run in a month.

Example - Price

- Compute
 - Provisioned cluster (ra3.4xlarge = \$3.26 per hour) = $8 * 3.26 * 720$
 - Serverless RPU's (\$0.375 per RPU hour) = $(0.375 * 32 * 6) * 30$
 - Concurrency Scaling (\$0.0009 per sec per node) = $(3 * 3600 * 0.0009 * 8) * 30$
 - Spectrum (\$5 per TB data scanned)
- Storage
 - RMS (\$0.024 per GB)
 - Backup (\$0.023 per GB)
